Abstract. Structural Intelligence (SI) defines intelligence as answerable revision under constraint. This index maps 100 of the world's most frequent search topics and societal concerns to the SI framework. By translating inquiries in mental health, finance, artificial intelligence, and governance into a formal systems-theoretic language, we demonstrate that the mechanics of Presence, Debt, and Occupancy are the underlying drivers of modern global trends.

Conclusion

The **SI Global Search Index** demonstrates that the world's most pressing inquiries—from personal health to civilizational collapse—are structural in nature. Sovereignty is the achievement of a system that can meet its own debt. By operationalizing these dynamics, SI provides the diagnostic tools required to restore answerability to the individual cockpit and the societal grid.
